To Whom It May Concern,

Ceramic Protection Corp. has been using Double Diaphragm pumps on our operation for over 10 years. The pumps we had been using usually have a life span of about 3-weeks before we have had to replace the diaphragms. We found that our Maintenance staff were constantly rebuilding pumps and ordering replacement parts for these pumps.

In December 2003 the Smith Cameron Rep. introduced us to a 2" Yamada Double Diaphragm Pump. He was so confident that this would work for us that he gave us a free trial period of one month to prove the durability and quality of this pump. This pump has been in service since then and has not even had to be rebuilt yet. We have been pumping ceramic slip which is very abrasive and thick. The pump runs for a min of 8 hours a day 5 days a week.

After 3 months of operating this pump we decided to replace our other 2 pumps with the Yamada pump. We have had the same longevity as the first pump. With our plant expansions we are in the process of ordering 3 more pumps. I would highly recommend these pumps and the service we have received from Smith Cameron.

Rex Sainsbury
Purchasing / Maintenance Manager
