

Water for the World

SMITH CAMERON
PUMP SOLUTIONS

Zenon Membrane Technology

Utilize the hollow core membrane filtration for the production of safe potable water from surface water sources. The ZeeWeed membrane is a physical barrier system removing most pathological influences from the water effectively reducing the requirement for chemical disinfection while providing a safe drinking water source.

ZENON's ZeeWeed® MBR and Cycle-Let® wastewater treatment systems provide full effluent treatment systems producing high quality effluent with very low BOD, TSS, and Turbidity measured values from wastewater enabling the low cost and self contained treatment that is odor free, low cost construction, and uncomplicated maintenance for locations without access to municipal sewer systems.

Zenon's Cycle-Let® systems provide cost-effective and reliable wastewater treatment, consistently delivering an effluent quality that is ideal for any discharge option or reuse application, without the need for a full time operator. The Zenon system contributes to Leeds certification when used in commercial and public buildings for reuse applications.
